

# ONTARIO'S SHOT AT HEALTH AND PROSPERITY

Vaccines protect people, ease pressure on healthcare, and help keep Ontario's economy moving. But today's immunization system is too fragmented, leaving many Ontarians unsure what they need, when they need it, where to get it, and whether it is covered. Ontario can fix this by making immunization simpler, more accountable, and better supported by modern data.

## The Path Forward

### Simplify vaccine access

Remove unnecessary barriers by modernizing regulations, expanding delivery options, and enabling access to all recommended vaccines through convenient, trusted care settings.

### Strengthen governance and accountability

Establish clear provincial leadership, define roles across the immunization ecosystem, and introduce transparent reporting to align stakeholders around performance and outcomes.

### Accelerate implementation of a modern provincial immunization registry

Build and accelerate a comprehensive provincial record that captures vaccinations across all care settings and gives providers, patients, public health, and pharmacies the information needed to support better care and decision-making.

### Treat immunization as prevention infrastructure

Position immunization as a core health system investment that reduces avoidable healthcare costs, supports economic productivity, and strengthens population health preparedness.
